Methodology

Colocation network latency (two way): This is the Time taken by the message on the Colocation Network between a Member Rack and Exchange Gateway

Latency measurement from COLO reference Rack will be done in the last working day of the Quarter. This latency testing will be performed using network path latency tool between reference Rack located at Co-location and Exchange Gateway.

Reference Path Latency as on 28 March 2025

Latency in microseconds		
Minimum	Maximum	Average
262	270	278
